### FOR IMMEDIATE RELEASE

## Imaging Sciences International Continues Aggressive Expansion Worldwide with Two Exclusive Distributors in Asia

*American success of Imaging Sciences International's i-CAT™ 3-D dental imaging technology attracts two exclusive distributors in Asia, sparks worldwide marketing efforts*

**Hatfield, Pa.—November 22, 2004**—Imaging Sciences International, a global leader in the development and manufacturing of advanced dental and maxillofacial radiography products, today announced two exclusive distribution agreements in Asia. These new relationships continue the company's aggressive expansion into global markets, bringing Imaging Sciences' state-of-the-art, advanced 3-D dental imaging technology to dental professionals worldwide.

The firms aggressively will market Imaging Sciences' i-CAT™ advanced 3-D imaging system in Korea, Taiwan, and mainland China. This promising Asian market contains thousands of dental centers, but few have their own dental CT scanning machines. In Korea alone, there are 11 dental colleges, 55 university dental hospitals, 94 general dental hospitals, and about 14,000 dental clinics that dramatically could enhance patient care by offering the i-CAT™.

The two new distributors are:

- **Cyberknife Korea Inc.**, with offices throughout Korea in Busan City, Daegu City, and Daejeon City, is an authorized distributor of Accuracy Inc.'s

Cyberknife Stereotactic Radiosurgery System, used in St. Mary's Hospital, the Korean Cancer Center Hospital, and Kosin University Gospel Hospital to treat solid cancers throughout the body with the precise delivery of high-dose radiation, and a seller of used, conventional CT and MRI equipment including installation and maintenance service since 1991.

- **Chiu Ho Medical Systems Co., Ltd.**, with offices in Taipei, Taichuang, and KaoHsuang, Taiwan, markets and distributes a number of medical and dental products from companies such as Elekta, Yoshida, Denics, Radionics, and Nucletron.

Demand for the i-CAT™ has multiplied across the country and around the world since its introduction in 2003. The i-CAT's™ incredible success in America has attracted interest from dentists and oral surgeons around the globe who want the most complete imaging information on the anatomy of a patient's mouth, face, and jaw areas to provide the most accurate treatment and predictable outcomes for dental surgical procedures.

The i-CAT™ is a Cone Beam 3-D Dental Imaging System that creates comprehensive three-dimensional views of all oral and maxillofacial structures. Patients remain seated for a comfortable 'open environment scan' that captures the natural orientation of anatomy within seconds. The data is then quickly transferred to a computer and displayed on an intuitive 3-D mapping tool that allows doctors and technicians to select desired 'slices' for immediate viewing. Requiring under 60 square feet of office space, the i-CAT™ creates 3-D images at reduced cost and with less radiation than traditional CT scans.

“The i-CAT™ already has proven its worth to dentists across America who want the most comprehensive imaging information available to thoroughly prepare for the full scope of oral and maxillofacial surgery, including extractions, implants, reconstruction, and many other procedures,” says Edward Marandola, Imaging Sciences’ vice president and general manager. “We are excited to work with Cyberknife Korea and Chiu Ho Medical Systems to bring the i-CAT™ to the Asian market to further enhance the way dentists see patients. Establishing Imaging Sciences in the Asian market is only the first step in our global expansion efforts.”

### **About Imaging Sciences**

Serving the dental industry since 1992, Imaging Sciences International is a global leader in the development and manufacturing of the most advanced computer controlled dental and maxillofacial radiography products in the world. The company’s marquee products provide dentists and other health care professionals with on-site, state-of-the-art imaging that extends quality of care and provides more predictable treatment outcomes. The Panorex CMT provides state-of-the-art panoramic imaging, as well as complex motion tomography for implant and TM Joint imaging; and the i-CAT™ cone beam three-dimensional dental imaging system offers 3D imaging technology at a significantly lower cost and less radiation than traditional CT scans.

Imaging Sciences is recognized internationally by leading dentists and radiologists as one of the most innovative companies in the world. Learn more about Imaging Sciences’ cutting edge technologies at [www.ImagingSciences.com](http://www.ImagingSciences.com).
